

Press Release

Tampa, Florida, USA - September 11th, 2020

SWT's pilot units underway

In August 2020, SafBon Water Technology, Inc (SWT) delivered four pilot unit systems for a pilot study being conducted at a Seawater Desalination Plant located in Tampa, FL, under a rental and service agreement for minimum period of 12 months.

This study assay is part of the feasibility study for the Expansion and Optimization Project of the existing Desalination Facility that is been executed by owner's consultant. It will assist in evaluating the options on treatment process/technology modifications and configurations which are been considered for optimizing and expanding the plant.

SWT's pilot systems consist of one Dual Media Filtration (DMF) Unit, gravity type, one Ultrafiltration (UF) Unit, and two Seawater Reverse Osmosis (SWRO) unit.
